To Whom It May Concern:

I have sat in many a dentist's chair over my lifetime, and was truly afraid due to my past experiences. Dentistry as an important preventative measure, for me had always been a painful, fearful and expensive option.

I first met Dr. Hope in late 1999 with a mouthful of old metal fillings that had begun to crack off whenever they pleased ,usually, around mealtime! I had also lost a number of teeth possibly that could have been saved in the past, but had been pulled and lost forever due to financial reasons! During the past six years he has been a dentist who has concerned himself with me who sat at the end of his instruments. Through those instruments he not only helped me regain my healthy teeth, but has imparted compassion and dignity to me as a person! Along with his use of new technology, and the teaching he eagerly seeks to impart, Dr. Hope has slowly helped me dispel the fears that always accompanied my trips to the dentist. He progressively brought my teeth back to where they should be and beyond.

Dr. Hope is a dentist who imparts exactly what his name states H-O-P-E in the future of healthy teeth (not lost spaces), and in the promise of a wonderful smile.

God Bless him in his "art", and may it continue for as long as he wishes!

Sincerely,
Linda
